

Project Topic: AI Powered Lead Tracking System

uplight™

AI CODE FEST

Problem Statement

One of the biggest challenges between Marketing and Sales is the lack of visibility into lead follow-up and engagement. Marketing teams often generate qualified leads, but there is limited insight into whether those leads are progressing, generating business opportunities, or receiving timely follow-ups from Sales. Additionally, there is no streamlined way to communicate high-intent engagement signals, such as a lead interacting with marketing campaigns multiple times within a short period.

To address this gap, we are proposing an AI-Powered Automated SDR Lead Tracking System, a web-based application designed to improve collaboration between Marketing and Sales teams. The platform will provide real-time lead tracking, automated follow-up workflows, engagement monitoring, and visibility into deal momentum and pipeline movement. By creating a structured lead follow-up process and enabling smarter collaboration with Sales Development teams, the solution will help ensure that high-value leads are prioritized, nurtured effectively, and converted more efficiently.

Unique Value Proposition

- Real-time visibility into marketing leads across the entire sales funnel
- Automated lead tracking that reduces manual work and reporting gaps
- Better alignment between Sales and Marketing teams through shared data and workflows
- AI-powered insights to prioritize high-intent leads and improve conversion rates
- Faster lead handoff and follow-up to reduce response time
- Centralized dashboard for campaign performance and lead attribution
- Improved ROI tracking by connecting marketing efforts directly to sales outcomes
- Smarter decision-making with automated reporting and predictive analytics

WORKFLOW

Step 1: Marketing Lead Capture

Marketing campaigns generate leads from webinars, newsletters, LinkedIn, paid ads, and website forms. All incoming leads are automatically captured into a centralized tracking system with key details such as campaign source, contact information, segment, and engagement status.

Step 2: Smart Lead Qualification

Using AI-driven logic and predefined rules, leads are categorized based on engagement level, account health, priority, and activity status. This helps SDRs instantly identify high-intent prospects and focus on the most valuable opportunities.

Step 3: Automated SDR Workflow

The system automatically assigns lead owners, tracks last activity dates, and generates next follow-up reminders. SDRs receive a streamlined workflow with clear visibility into:

- Lead status
- Campaign attribution
- Follow-up timelines
- Activity history
- Qualification stage

Step 4: Real-Time Pipeline Tracking

Leads move dynamically across stages such as New, Nurturing, Disqualified, Existing. The workflow provides a real-time dashboard view, helping both Sales and Marketing teams monitor pipeline health and conversion progress.

Step 5: AI Insights & Reporting

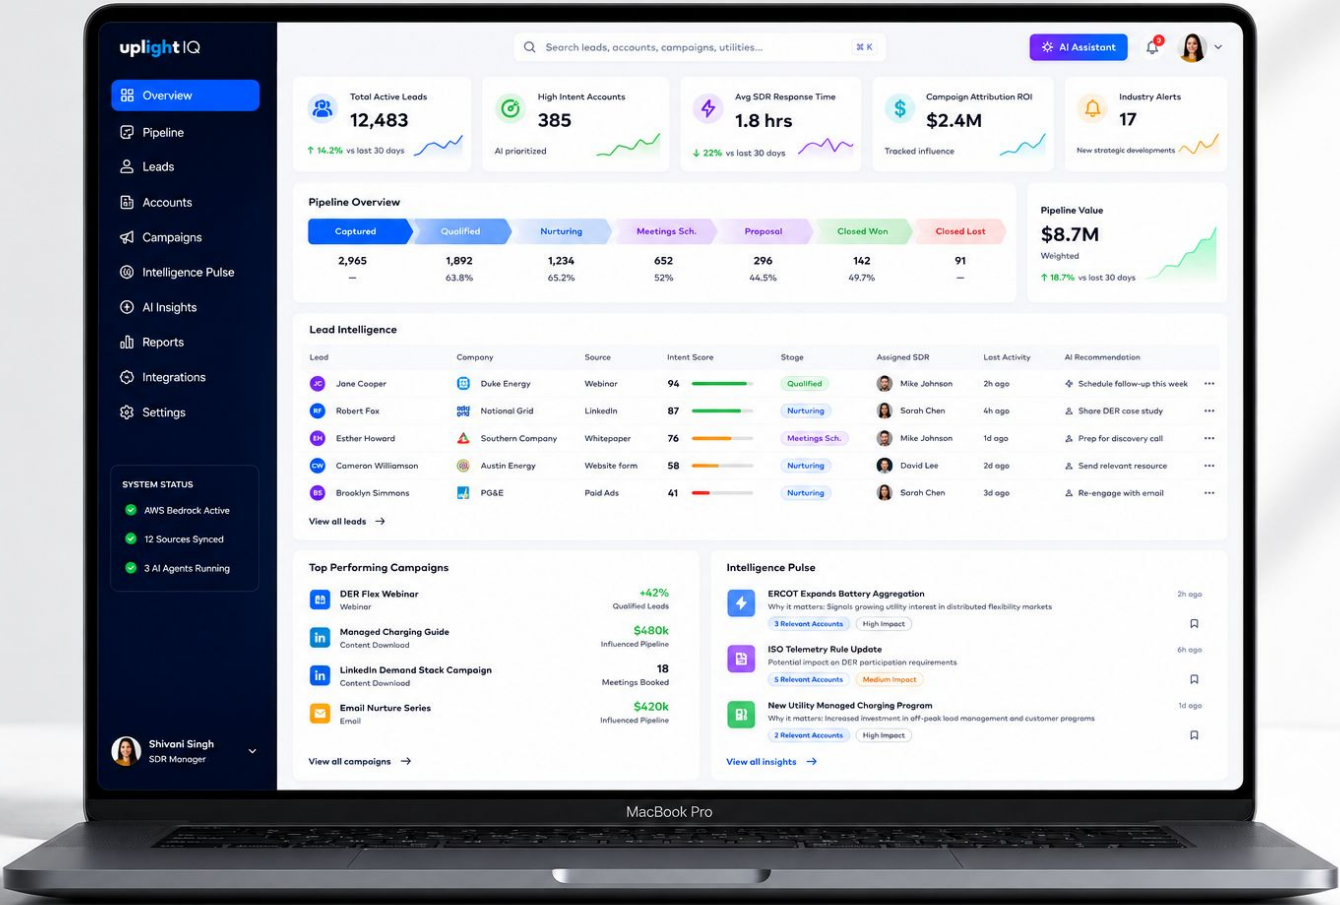

The platform delivers automated insights on campaign performance, lead response rates, conversion trends, and SDR activity. This enables teams to identify bottlenecks faster, optimize campaigns, and improve sales outcomes through data-backed decisions.

EXPECTED IMPACT

Conceptual Mockup

AI-Powered Automated Lead Tracking System, a web-based app

KEY METRICS

Lead Visibility & Tracking

Achieve **100% real-time visibility** into lead status, engagement history, and pipeline movement across Sales and Marketing teams.

High-Intent Lead Identification

Automatically identify and prioritize leads with **5+ engagement touchpoints per week** using AI-driven engagement scoring.

Sales & Marketing Alignment

Improve collaboration efficiency by creating a **single source of truth** for lead ownership, follow-up activity, and campaign attribution.

Pipeline Conversion Improvement

Increase marketing-qualified lead (MQL) to sales-qualified lead (SQL) conversion rates through smarter lead prioritization and automated follow-up reminders.

AI-Powered Engagement Insights

Enable real-time notifications for SDRs when leads show high buying intent based on campaign interactions, email opens, website visits, webinar attendance, and content downloads.

Deal Momentum Tracking

Monitor lead progression across pipeline stages to identify stalled opportunities and improve follow-up consistency.

MVP Development Plan

Engg Tools Used

- Python-main orchestration language with standard libraries
 - Feed parser
 - Requests
 - Beautiful soup
- AI processing layer- core intelligence layer
 - AWS Bedrock
- Python workflow orchestration
 - Receiving LLM outputs
 - Transforms into formatted newsletter (use python templates)
- Scheduling E2E workflow (AWS tooling)
 - AWS Lambda , Event Bridge(Python trigger)
- Distribution Layer
 - Automated email / Slack webhook

Designed as a lean MVP leveraging existing AWS AI infrastructure, DevOps capabilities, and internal collaboration tools.”

- Team Size: 1–2 people
- Development Time: 1–2 weeks
- Infrastructure: Existing AWS + collaboration tooling
- Operational Overhead: Minimal

Key Metrics

- Processing turnaround time
- Intelligence Quality Metrics
- User Engagement Metrics

Design & Development

- Building a MVP wireframe
- Using loveable, tailwind css to build the app bones
- Cursor ai for the remaining integrations and design

Sr Visual Designer

Already Approved AI Tooling

General Data / Corp

Google Gemini

- Off the shelf connectors + MCPs

Databricks AI

- Any non-CFIUS / non-limited

LLM / MCP / Chatbots

- AWS Bedrock
- AWS DevOps AI, etc
- Self Hosted Models

DevEx

CoPilot - non-CFIUS repos

AWS VM (Linux or Windows)

- Access to non-CFIUS public data for CFIUS laptops

Others? Let us know!

- Claude Code?
- Cursor?

Don't worry - we have **ambassadors & Slack channels** to help

What it Is

Company Wide / Individual or Team Projects

Open to all employees,
solo or in groups.

**Create excitement and
energy to innovate**
with LLMs, MCPs,
Agentic AI, Tools.

**Focus on driving
product quality,
operational efficiency
and customer
innovation.**

LLM - Large Language Model, MCP - Model Context Protocol
